Help, I need to design a logo but don't have any money:

Canva – is amazing and simple to use for designing logos, social media headers, presentations etc. You can use it on your computer or phone for super quick logos, banners and more.

Make sure that you use the same logo and font across all marketing materials e.g. Facebook banners, website, social media etc. You want your brand to be consistent.

Also get your logo in different colours so you can choose which you want to use and when. You might want to print on black at some point, so you'll need your logo in white too.
